Experiment 1&2

Footprinting on the Target Network

Aim

To perform passive footprinting on a target network using search engines, web services, and social networking sites to gather publicly available information.

Procedure

1. Choose an authorized target. Target website:https://www.python.org
2. Open Google and search: site:python.org to list indexed pages.
3. Search for documents using: site:python.org filetype:pdf.
4. Search for login pages using: site:python.org inurl:login
5. Perform a WHOIS lookup to identify domain registration details.
6. Use a DNS lookup service (domain tools) to view A, MX, NS, and TXT records.
7. Use an IP lookup service to obtain IP location and ISP details.
8. Use BuiltWith (or a similar service) to identify the technologies used by the website.
9. Use crt.sh to identify publicly known subdomains from SSL certificates.
10. Search LinkedIn and other social networking sites for publicly available organizational information.
11. Record all collected information in an observation table.

Sample Output

Information	**Sample Result**
Target Domain	python.org
Indexed Pages	Home, Python Developer's Guide, Python Infrastructure Status, Python Packaging User Guide, Discussions, Python Insider (Blog)
PDF Files	Return of Organization Exempt From Income Tax (Form 990), ReportLab API Reference, Python Tutorial, Math408: Combinatorics
WHOIS	Registrar: Gandi SAS Registered On: 1995-03-27T05:00:00.545Z Expires On: 2033-03-28T05:00:00Z Updated On:

	2026-06-16T21:28:53.106Z Domain Status: client transfer prohibited Name Servers: ns-1134.awsdns-13.org ns-2046.awsdns-63.co.uk ns-484.awsdns-60.com ns-981.awsdns-58.net
DNS Records	A Record: 151.x.x.x TTL:5 min
Technologies	Nginx,jQuery,Python ,Plausible Analytics Cloudflare Radar,Modernizr,GlobalSign, LetsEncrypt,Apache,HSTS
Subdomains	mail.python.org, policies.python.org , blog.python.org ,wiki.python.org, www.python.org
Social Media	Python Software Foundations

Result

The target network was successfully footprinted using publicly available search engines, web services, and social networking sites. Information such as domain details, DNS records, technologies, and public organizational information was collected without directly interacting with the target systems.
